QRO Check-IT application

"QRO Check-IT the most comprehensive ANPR Software Application Suite"

QRO CHECK-IT THE MOST COMPREHENSIVE ANPR SOFTWARE APPLICATION SUITE AVAILABLE

QRO Solutions Check-IT application has been in operation in UK Police forces for nearly 18 years. The application has been specifically tailored for touchscreen operation and ease of use. The software is utilised in over 500 vehicles and office PCs UK wide and is continually developing to provide further enhancements and increased integration to other systems and hardware.

Check-IT is typically deployed on laptop, in-vehicle, desktop and server environments and operates on Windows 7 Professional and Windows 10.

Check-IT also incorporates a SQL storage database for logging and searching of logged vehicles and images. This can be deployed on a network environment and incorporates a web based search interface.

Check-IT can be used as a standalone application with local vehicle alert lists or can be integrated into a network based structure with multiple instances of Check-Its communicating reads back to a central server via 4G/3G/GPRS for centralised matching. Any successful matches are returned to the originating Check-IT as an alert.

Typical features of Check-It include:

- Touchscreen camera control
- BOF 2.2 and ANPR management server connection support
- Local and remote hotlist matching
- Communications via LAN, WLAN, GPRS & 4G capable
- Multiple instances of Check-IT can communicate to each other over a network
- Can operate as a central server for remote Check-ITs
- CSV or XML data output logging
